Description:

The variant surface lipoprotein LPP of *Mycoplasma hyorhinitis* was shown to be processed by cleavage of a characteristic prokaryotic prolipoprotein signal peptide. The prolipoprotein signal peptidase II recognition sequence along with an extensive hydrophobic region near the amino terminus, suggesting that the protein may be lipid modified or that it is anchored in the membrane by this membrane-spanning region.

Uniprot: Q6MTH7

Alternative Names:

Prolipoprotein; MSC_0431;

Specificity: LPP Antibody detects endogenous levels of total LPP.

Reactivity: *Mycoplasma mycoides* subsp. *mycoides* SC (strain PG1)

Source: Mouse

Mol.Wt.: 40kDa

Storage Condition: Store at -20 °C. Stable for 12 months from date of receipt.

Application: WB 1:1000–1:2000; IHC/IF 1:50–1:500
