Description:

The heterodimer glycoprotein H-glycoprotein L is required for the fusion of viral and plasma membranes leading to virus entry into the host cell. Following initial binding to host receptor, membrane fusion is mediated by the fusion machinery composed of gB and the heterodimer gH/gL. May also be involved in the fusion between the virion envelope and the outer nuclear membrane during virion morphogenesis.

Uniprot: L0N679

Alternative Names:

UL22; Gh;

Specificity: Human herpesvirus 1 (strain KOS) (HHV-1) (Human herpes simplex virus 1)
Envelope glycoprotein H.

Source: Mouse

Mol.Wt.: 92 kDa

Storage Condition: Store at -20 °C. Stable for 12 months from date of receipt.

Application: WB 1:1000-1:2000; IHC/IF 1:100-1:1000
