BACKGROUND:

50kD or 25kD protein detection on Western blots after Immunoprecipitation is often suffered from heavy or light chain blotting contamination. AbSmart products solve these problems through less background noise, and enhanced accuracy. The light chain / Fc fragment specific optimization eliminates heavy / light chain interference, while serum proteins absorbed minimizes cross-reactivity with immunoglobulins from other species which may be present on blots.

DESCRIPTION:

Affinity purified Goat Anti-Mouse IgG antibody is conjugated to horseradish peroxidase.

Reactivity: Detects Mouse IgG..

Storage Condition: Store at -20 °C. Stable for 12 months from date of receipt.

APPLICATIONS:

This product has been optimized to use as a secondary antibody in chemiluminescent applications.

RECOMMENDED ANTIBODY DILUTION

WB: 1:1000—1:5000
