Western blot analysis of Beta-catenin expression in HeLa (A), 293T (B), mouse liver (C), rat liver (D) whole cell lysates.

IHC

Immunohistochemical analysis of Beta-catenin staining in human lung cancer formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room

temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.
