Description:

Key regulatory enzyme of the glycolytic pathway that catalyzes the final step of glycolysis, converting ADP and phosphoenolpyruvate (PEP) to ATP and pyruvate by essentially irreversible transphosphorylation. Is critical for plant growth and development.

Alternative Names : Pyruvate kinase

Reactivity : Zea mays; Rice;

UniProt : B4F9G8

Mol.Wt. : 57 kDa

Application : WB, IF, IP

Source : Mouse

Clonality : Monoclonal

Storage Condition : Store at -93°C long term.
